

Salt spraying equipment

Client: Ozamet
 Company name: Ozamet
 Branch: Machinery
 Field of activity: Poland

To prevent icy and slippery roads in wintertime, Ozamet develops and produces “state-of-the-art” salt spraying equipment in the Polish town of Jonkowo. The production, engineering and services are high quality. Baril Coatings Poland managed to convince Ozamet three years ago to convert the traditional 3-layer system that they used into a 2-layer “NORSOK” tested DualCure system from Baril Coatings. This system provides protection for corrosion class C5 with 2 layers, 200 µm in total, with a superior color and gloss retention. The total system is applied in a timeframe of less than 3 hours!

By using the DualCure Chemistry system, developed by Baril Coatings, less coating is needed. This is better for the environmental impact and leads to a more sustainable result. This coating is dirt-repellent, so there is less dirt on the equipment. The DualCure paint system is also less vulnerable of damage during transport. This leads to less maintenance and lower maintenance costs.

C5 C-5 Semigloss High Speed

Layer 1 306 DualCure Zinc Primer	80µm	01:00
Layer 2 171i2 DualCure SX DTM Finish 60	100µm	02:00
Total	200µm	03:00

extreme corrosion resistant

permanently flexible

40% less film thickness

impermeable
