

KTK-Holimex

Company name	KTK Containers B.V. Holimex International B.V.
Branch	Container construction
Field of activity	Worldwide
Location	Almelo, The Netherlands
Application coating system	Holimex International B.V.

KTK offers high quality containers. The production is carried out by Holimex International. The collaboration between these two companies yields an extensive package of products. For example, they produce containers, roll containers, waste compaction plants, tippers and roller compactors.

The pre-treatment and final application of the paint system takes place with the existing blasting and spraying equipment. A thin layer of paint is applied by means of electrostatic application.

The long life of these sustainable products is a nice combination with the SteelKote product line. In particular the applied SteelKote Pacific 90 UV + ensures good protection of the containers. Thanks to this protection, the containers can be placed anywhere in the world, even in the more extreme weather conditions.

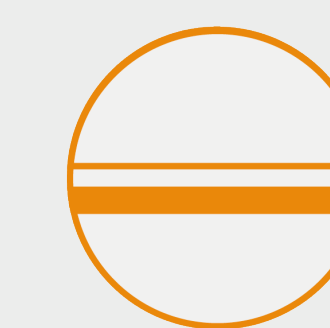

C3 C3 High > 15 year		
Layer 1	20411 Uniprimer	80µm
Layer 2	818 SteelKote Pacific 90 UV+	60µm
